LEB-2D13 - Line 5

Spectrum Multi-Client seismic coverage in RED

MULTI-CLIENT

|                         |  |                        |
|-------------------------|--|------------------------|
| Survey Name:            | LEB-2D13 - Line 5  |                        |
| Type:                   | 2D Seismic   |                        |
| Date:                   | 2013   |                        |
| Survey Size:            | 34 km  |                        |
| Acquisition Parameters: | Shot Point interval:   | 50 m                   |
|                         | Group interval:  | 25 m                   |
|                         | Source type:   | Vibroseis              |
|                         | Sweep frequency:   | 6 - 80 Hz Non-Linear   |
|                         | Number of sweeps per VP:   | 4                      |
|                         | Number of channels:  | 2 x 240 (Split Spread) |
|                         | Nominal fold:  | 120                    |
|                         | Record length:   | 6000 ms                |
| Processing Sequence:    | Full details of the processing sequence are available on request |                        |
| Deliverables:           | Final PSTM Stacks Filtered/Scaled                                |                        |
|                         | Final Filtered PSTM Stacks                                       |                        |
|                         | Raw PSTM Stacks  |                        |
|                         | PSTM Stacking Velocities   |                        |
|                         | PSTM Migration Velocities  |                        |
|                         | Shot and Receiver Statics  |                        |
|                         | Post PSTM Gathers  |                        |
|                         | Processing Report  |                        |
|                         | Final Processed and Merged Navigation File                       |                        |
