

### Spectrum completes new Adriatic Multi-Client project

Spectrum has completed the reprocessing of approximately 8,500 km of regional 2D seismic data from the Italian sector of the Adriatic Sea on a Multi-Client basis. The original surveys were acquired by the Italian government as part of a study to highlight the hydrocarbon potential of the Adriatic Sea.

The majority of production in the region is from Pliocene age gas fields, many of which have multi-TCF reserves. However, the deeper potential of the Adriatic has yet to be fully explored and this reprocessed data library, which shows many un-drilled structures, should lead to a greater understanding of the hydrocarbon potential within the Adriatic Sea.

The reprocessing was carried out in Spectrum's state-of-the-art processing centre. The data is now available and it has already triggered significant industry interest through the direct hydrocarbon indicators highlighted.

**About Spectrum**

*Spectrum provides innovative Multi-Client seismic surveys and high-quality seismic imaging services to the global oil and gas industry from offices in the UK, USA, China, Egypt, Australia, Indonesia and Singapore.*

*Spectrum's Multi-Client strategy focuses on both the major, established hydrocarbon-producing regions of the world as well as key frontier areas identified by our experienced team of geoscientists. The Spectrum library of Multi-Client data has projects from many of the foremost oil producing regions of the world. These include new acquisition, reprocessing and interpretation reports.*

*All statements in this press release other than statements of historical fact are forward-looking statements and are subject to a number of risks, uncertainties and assumptions that are difficult to predict and are based on assumptions as to future events that may not prove accurate.*
